Abstract

PROBLEM TO BE SOLVED: To enable TS stream data to be efficiently managed in the case of constructing a streamer using a DVD-RAM capable of executing a random access.

SOLUTION: In a DVD recording and reproducing system, in a set-top box part STB 83, an MPEG transport stream consisting of plural transport packets is received and support information showing whether prescribed items are present in the management information included in the transport packets or not are taken out in a formatter part 90. A drive part 51 for recording data on a recording medium having a management area and a data area records these support information in the management area.
